

# Color scheme

This is the original color scheme of my website and i chose it because the colors compliment each other nicely while still appealing to users of light mode screens and still presents multiple inviting colors to grab the reader's attention

I chose this color palette as it is even more attention grabbing than the other one while still keeping to the original theme just replacing the red with blue (being the cold color) to bring forth warmer colors for the reader to indulge in while browsing my website.

This color palette is a complete overhaul but it was chosen for the use of dark mode users as this provides them with a more pleasant dimmer experience as dark blue for the middle and black for the background reduce warmth from the screen while still have difference in contrast and shade to keep the reader interested and be able to separate sections from one another clearly.
